# Reflection

CS 151

Professor Z.

9/25/24

This lab assignment was challenging but still manageable. I found some issues with the test cases and structuring the code. Specifically, the comments in the code had to be made understandable to the user. We finished the assignment and working with my partner this week was great. We both understood what we had to do, although there were some technical difficulties in the process. We did a lot in the lab, so the at home portion wasn't difficult. I learned how to correctly use if statements as well. Zybooks helped me understand it more and using it on python made it click in my head. I used floats which weren't a problem since we've used them before this lab.

In our lab we used multiple test cases, and they worked with the equation. Since the test cases worked, the equation was easy enough to translate into coding. Other than the equation the coding this week wasn't too much of an issue, still I ran it a few times and it would mess up. I was able to overcome these issues by reading the code carefully and thinking.
